

**Errata**  
**October 30, 2006**

The CTI-RX5D100v2 (version 2) datasheet is a correct working datasheet (Please check the version number, top right hand corner of the datasheet).

However, the previous version of the datasheet, (which was posted on the Yahoo group), e.g., CTI-RX5D100 datasheet was wrong. It provided schematic for the external capacitors and inductor connection. Apparently, there was a mismatch of the pins, which in fact can cause problem to potentially damage the external inductor.

Note the pin assignment from the datasheet: Pin 2 and P3 both are connected to the GND, while Pin 5 is connected to Vcc, hence the corrected schematics should follow, as shown in the figure below.
